

The fully molded cuffs eliminate uncomfortable rivets and hinges. The v-design creates easy entry and still enables patients to go hands free.

The ergonomic positioning and design of the grips keep hands and wrists in their natural position, eliminating wrist pain and nerve damage common to crutch use.

The newly re-designed cylinder bracket and double reinforced strut ensure the product's strength and durability throughout the handle portion of the crutch.

The unique folding feature allows users to quickly put their crutches in and out of use without changing any height adjustments. This makes the In-Motion Pro the most convenient crutch to travel with, store and ship.

The Sure Foot Articulating Tip gives greater stability on uneven surfaces and eliminates dangerous shear forces.

The patented Spring Assist Technology absorbs negative impact energy and returns positive kinetic energy to aid patient ambulation.
